What's Flex?

MXML + ActionScript 3.0

Why MXML Better?

```
<mx:Button label="click me" width="300"  
height="200" fontSize="12"  
click="eventHandler(event)"/>
```

```
Import mx.controls.Button;  
var myButton:Button = new Button( );  
myButton.label="click me";  
myButton.width=300;  
myButton.height=200;  
myButton.setStyle("fontSize",12);  
myButton.addEventListener("click",eventHandler);  
This.addChild(myButton);
```
